## Tabular data details:

<b>Total number of observations</b>	3,425
<b>Total number of files</b>	2 (sheets in the Excel file)
<b>Total number of features</b>	72
<b>Base format of the file</b>	Excel
<b>Size of the data</b>	898 KB

## Proposed Approach

- Deduplication Validation (Identification):
  - Identify and eliminate duplicate records using unique patient IDs.
  - Maintain data integrity by cross-checking multiple identifiers (e.g., patient ID, date of birth).
- Assumptions:
  - All entries with the same patient ID pertain to the same individual.
  - Missing values can be addressed using statistical methods (mean/median) or model-based techniques.
  - Data quality issues like outliers can be managed through standard preprocessing methods.
